

AMENDMENTS

1. (previously amended) A hair conditioning composition comprising:

(1) an acrylic acid/alkyl acrylate copolymers having the following formula:

wherein  $\text{R}^{51}$ , independently, is a hydrogen or an alkyl of 1 to 30 carbons wherein at least one of  $\text{R}^{51}$  is a hydrogen,  $\text{R}^{52}$  is as defined above,  $n$ ,  $n'$ ,  $m$  and  $m'$  are integers in which  $n+n'+m+m'$  is from about 40 to about 100,  $n''$  is an integer of from 1 to about 30, and  $\ell$  is defined so that the copolymer has a molecular weight of about 500,000 to about 3,000,000;

- (2) an amphoteric conditioning polymer; and
- (3) an aqueous carrier.

2. (Original) The hair conditioning composition according to Claim 1 further comprising a humectant.

3. (Original) The hair conditioning composition according to Claim 1 further comprising a silicone conditioning agent.

4. (Original) The hair conditioning composition according to Claim 1 further comprising an additional viscosity modifier.

5. (Currently amended) The hair conditioning composition according to Claim 1 further comprising a visible particle wherein the visible particle has an average diameter of from about 50  $\mu\text{m}$  to about 3000  $\mu\text{m}$ .

6. (Original) The hair conditioning composition according to Claim 1 further comprising a UV absorber.

7. (Original) The hair conditioning composition according to Claim 1 further comprising an optical brightener.

8. (Original) The hair conditioning composition according to Claim 1 further comprising a herbal extract.

9. (Original) The hair conditioning composition according to any of the preceding claims further comprising an additional conditioning agent.

10. (Previously amended) A hair conditioning composition comprising by weight:

(1) from about 0.01% to about 10% of an—acrylic acid/alkyl acrylate copolymers having the following formula:

wherein  $\text{R}^{51}$ , independently, is a hydrogen or an alkyl of 1 to 30 carbons wherein at least one of  $\text{R}^{51}$  is a hydrogen,  $\text{R}^{52}$  is as defined above,  $n$ ,  $n'$ ,  $m$  and  $m'$  are integers in which  $n+n'+m+m'$  is from about 40 to about 100,  $n''$  is an integer of from 1 to about 30, and  $\ell$  is defined so that the copolymer has a molecular weight of about 500,000 to about 3,000,000;

- (2) from about 0.01% to about 10% of an amphoteric conditioning polymer;
- (3) from about 0.1% to about 20% of a humectant;
- (4) from about 0.1% to about 60% of a silicone compound;
- (5) from about 0.01% to about 10% of an additional viscosity modifier; and
- (6) an aqueous carrier.
